

## Reliable components for safe process technology - LINNEMANN with innovations for TA Luft 2021 and 3D printing in engineering at ACHEMA 2024

LINNE MANN GmbH presents innovations in the areas of high-quality pipe connections and stainless steel fittings. Of particular interest to system planners are the solution-oriented overall range and the extended service offering, which allows individual assemblies to be realized at short notice.

The certified company will be demonstrating pipe connection systems in accordance with national and international standards as well as in-house developments using sample solutions.

- Clamp flanges
- Welding neck flanges
- Screwed pipe connections
- Screw flange
- Pipe couplings

for various media:

- Gases
- Liquids
- Bulk materials

for negative and positive pressure systems for many industrial sectors, e.g.

- Food
- High vacuum
- Chemistry
- Pharmacy
- Cryogenic technology

The seals required for the connection - depending on the requirements - with the necessary certificates will also be on display at the trade fair.

An innovation that helps customers optimize planning: complex custom-made products can be output as 3D prints in advance. This makes real tests possible. This saves time and money and also enables more efficient project planning.

Certified PTFE-coated FKM clamp gaskets according to DIN 32676 are shown for the new TA Luft 2021. The clamps developed by LINNEMANN meet the new requirement of TA Luft that connections must be tested in their entirety and not just the seal.

**Hall 8.0, Stand B1, June 10-14, 2024 in Frankfurt**
