

Reliable components for safe process technology – LINNEMANN with updated portfolio at ACHEMA 2018

With a cutting-edge booth concept, LINNEMANN GmbH will show-case innovations in the fields of high-quality pipe connections and stainless steel fittings. The equivalents of the old standards DIN 2605, 2615, 2616, 2617 will, for instance, be presented according to the new standard DIN EN10253-1 to DIN EN10253-4. Special designs for process technology in plant construction will also be exhibited, such as the tried-and-tested clamping rings for flange connections, which offer clear advantages over bolts. One of the strengths of the Tübingen-based company is the scope of its available component portfolio. With the extended range of services, individual assemblies can be executed at short notice.

The certified company presents the pipe connection systems based on both national and international standards, alongside its own sample solutions.

- Clamp flanges
- Weld neck flanges
- Screwed pipe connections
- Screwed flanges
- Pipe couplings

for various media:

- Gases
- Liquids
- Bulk materials

for vacuum and pressurised systems for many industrial sectors, such as

- Food
- High-vacuum
- Chemical
- Pharmaceutical
- Cryogenics

The seals required for connection – depending on requirements – will also be presented at the trade fair, along with the necessary certificates.

E.g. pipe connections made of stainless steel, aluminium or glass

Hall 8.0, Booth B1, 11th –15th June in Frankfurt
